EVELOPMENTAL BIOLOGY 43, iii–iv (1975)

Contents of Volume 44

NUMBER 1, MAY 1975

ull Papers

HORACIO MERCHANT. Rat Gonadal and Ovarian Organogenesis With and Without Germ Cells. An Ultrastructural Study 1
EDWARD J. CARROLL, JR. AND DAVID EPEL. Isolation and Biological Activity of the Proteases Released by Sea Urchin Eggs following Fertilization 22
A. A. MOSCONA AND A. W. WIENS. Proflavine as a Differential Probe of Gene Expression: Inhibition of Glutamine Synthetase Induction in Embryonic Retina . 33
WALTER E. BOLLENBACHER, WAYNE V. VEDECKIS, LAWRENCE I. GILBERT, AND JOHN D. O'CONNOR. Ecdysone Titers and Prothoracic Gland Activity during the Larval–Pupal Development of *Manduca sexta* 46
PAMELA DELANEY AND M. A. Q. SIDDIQUI. Changes in *in Vivo* Levels of Charged Transfer RNA Species during Development of the Posterior Silkgland of *Bombyx mori* 54
PAUL S. BURGOYNE. Sperm Phenotype and Its Relationship to Somatic and Germ Line Genotype: A Study Using Mouse Aggregation Chimeras 63
PAUL C. LETOURNEAU. Possible Roles for Cell-to-Substratum Adhesion in Neuronal Morphogenesis 77
PAUL C. LETOURNEAU. Cell-to-Substratum Adhesion and Guidance of Axonal Elongation 92
JOEL ZIMMERMAN. The Initiation of Melanogenesis in the Chick Retinal Pigment Epithelium 102
LAURIE E. ITEN AND SUSAN V. BRYANT. The Interaction between the Blastema and Stump in the Establishment of the Anterior–Posterior and Proximal–Distal Organization of the Limb Regenerate 119
JONATHAN VAN BLERKOM AND GARY O. BROCKWAY. Qualitative Patterns of Protein Synthesis in the Preimplantation Mouse Embryo. I. Normal Pregnancy 148
DONALD F. HAGGERTY, PEGGY L. YOUNG, AND JAMES V. BUESE. A Tyrosine-Free Medium for the Selective Growth of Cells Expressing Phenylalanine Hydroxylase Activity 158
ARNOLD HAMPEL, K. V. PRAHLAD, S. T. BREI, BRUCE RUEFER, AND CHRIS MLOT. Permeability of *Xenopous laevis* Embryos: Specific Incorporation of Precursors into Eukaryotic Proteins and Nucleic Acids 169
JAMES A. STEWART. Contribution of a Change in mRNA Half-Life to the Accumulation of the Tissue-Specific S-100 Protein during Postnatal Development of the Mouse Brain 178
ANTHONY L. MESCHER AND ROY A. TASSAVA. Denervation Effects on DNA Replication and Mitosis during the Initiation of Limb Regeneration in Adult Newts .. 187

Brief Notes

MICHAEL P. KAMBYSELLIS AND IMOGENE SCHNEIDER. *In Vitro* Development of Insect Cells. III. Effects of Ecdysone on Neonatal Larval Cells 198
A. BIGNAMI AND D. DAHL. Astroglial Protein in the Developing Spinal Cord of the Chick Embryo 204
FREDERICK W. LUTHARDT AND ROGER P. DONAHUE. DNA Synthesis in Developing Two-Cell Mouse Embryos 210
BARRY P. DAVIS, JOHN J. JEFFREY, ARTHUR Z. EISEN, AND ALBERT DERBY. The Induction of Collagenase by Thyroxine in Resorbing Tadpole Tailfin *in Vitro* 217

Information for Authors

Developmental Biology will publish in English original papers and review articles bearng on problems of development in the broadest sense; it will contain papers dealing with mbryonic and postembryonic development, growth, regeneration, and tissue repair both f plants and animals. Papers dealing with reproductive biology and biology of aging that eveal fundamental mechanisms of general interest will also be published. The journal erves as a meeting ground for studies on development that employ techniques from a ide range of disciplines, e.g., biochemistry, biophysics, cytology, experimental morphoenesis, teratology, genetics, immunology, microbiology, pathology, pharmacology and hysiology. The journal aims for rapid publication; currently, publication time is 4–5 nonths from date of acceptance.

Articles usually do not exceed 15,000 words and must be accompanied by an abstract nat gives, in 200 words or less, a synopsis of the work, including methods and results. *Brief notes* are 2500 words or less including the bibliography, which should contain only 2 references unless the abbreviated reference format is used (see directions under references). The conventional format is: abstract, introduction, methods and materials, results, and discussion, but authors are encouraged to present their material in the most ogical and appropriate form.

Figures should be numbered consecutively in the order of their appearance and each hould have a descriptive legend. Mark all figures with the author's name and address.

Line drawings should be made with India ink on smooth white paper. Do not submit riginal line drawings larger in size than 13 × 10″; instead enclose smaller high quality rints for the printer and for editorial use (two copies). Be sure lettering is uniform and arge enough to allow for reduction and that the drawings when reduced will be either olumn (2⅝″) or page (5½″) width. A figure that is submitted 5¼″ wide with lettering mm high when reduced 50% will be a single column width. A figure submitted 11″ wide vith lettering 3 mm high when reduced 50% will be full page width.

Photographs submitted for publication must be the actual size for reproduction and arefully labeled with letters 2–4 mm high. The page size of the journal must be considred and the following format observed.

(1) Column width figures are to be no wider than 2⅝″ or longer than 8″.

(2) Page size figures should be 5½″ wide and no longer than 8″.

(3) If the author decides to bleed the page (no margins), figure numbers should be no loser than ¾″ to the margin to allow for trimming during binding of the journal. Figures o be bled must be 6⅞ × 10″ (submitted at 7 × 10¼″ to allow trimming).

Use unmounted figures where possible, but when several appear together as one plate, nount them on cardboard or paper as close together as possible. The engraver will tool hin white lines between figures. Give magnification in the legend or indicate with a μ narker on the photograph. Two pages of half-tone figures per article and ten pages of alf-tone figures per review article will be published without cost to the author; a charge f $50 per page will be required for pages in excess of this number. The author will defray he expense of colored plates.

Tables should be used to condense data referred to in the text. They should be typed n separate pages, numbered consecutively with Arabic numerals in order of mention n the text, and collected at the end of the manuscript. Give each table a concise, descriptive heading. Tables should be so composed that the content can be grasped without reference to the text.

References to the literature may be cited in one of the following forms: Doe (1965) has observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); Doe 1961, p. 250). Use suffixes a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Alternatively, references may be referred to by number: Doe (1) has observed that . . . (see also 5, 10, 16). Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals in accord with Chemical Abstracts' Service Source Index. Number the references only if they are referred to by number in the text. For a brief note with more than twelve references, references in the text must be cited by number and titles omitted in the bibliography section. The same short form may be used with a full paper when an excessive number of references are quoted.

Galley proof should be read carefully as no page proof will be sent to authors. Be certain figures are the correct size and correctly reproduced either as halftones or line drawings and avoid excessive text changes that involve resetting. Reprints may be ordered when galley proof is returned. Fifty reprints are supplied gratis.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. They must be typewritten, double-spaced, on one side of white bond paper about $8\frac{1}{2} \times 11''$ in size, with the pages numbered consecutively. Indicate the address for galley proof. Include with full length articles a running headline not exceeding 35 letters and spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in consecutive order in the text and type them consecutively on a separate sheet. Acknowledgments and figure legends should also be typed, double-spaced, as separate sections. Two copies of the manuscript (original and carbon) and two copies of the figures should be mailed to Dr. Elizabeth D. Hay, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115.
